

DIGITAL LITERACY PROJECT REPORT

Name: Sneha Sarkar

Registration Number: 25BCE11156

Branch: CSE Core

Year: 1st Year

Course

Code:

CSE001

Date: 30 March 2026

Introduction

This project focuses on understanding digital literacy and its importance in today's world. It includes different tasks that help build practical skills related to using digital tools safely and effectively. The project covers areas such as creating an infographic, building a digital portfolio, practicing coding, learning professional communication, and understanding cyber safety. Each task is designed to improve awareness about responsible digital behaviour and the use of online platforms. Through this project, I was able to explore various tools and understand how they are used in academic and professional environments. Overall, it helped me gain useful knowledge and improve my digital skills.

Task 1 Write-up

For Task 1, I created a digital literacy awareness infographic using Canva. The aim was to present important concepts in a simple and visually appealing way for students. The infographic includes topics such as the meaning of digital literacy, safe internet practices, useful digital tools, and maintaining a professional online presence.

While designing it, I focused on keeping the layout neat and easy to understand by using sections, icons, and simple points. I made sure not to overload the design and included only the most relevant information.

This task helped me understand how to present information clearly and effectively. It also made me realize the importance of digital literacy in everyday academic and professional life.

Task 2 Write-up

For Task 2, I worked on building my digital portfolio using platforms such as GitHub, LinkedIn, and Kaggle. On GitHub, I created a profile README where I introduced myself with my course, year, and learning goals. This helped me understand how GitHub can be used to showcase work.

On LinkedIn, I updated my profile by adding my education details, which is important for maintaining a professional online presence. I also explored Kaggle as a platform for learning and practicing technical skills.

This task helped me understand the importance of having a strong digital identity. In the future, I plan to use these platforms to share my work, connect with others, and improve my skills.

Task 3 Write-up

For Task 3, I explored coding and collaboration platforms to improve my digital skills. I used HackerRank to solve a beginner-level problem called “Solve Me First.” This helped me understand basic programming logic and how coding platforms work.

I also created a Google Form titled “Digital Literacy Awareness Quiz” with five questions related to digital literacy and safe internet practices. I linked the form to a Google Sheet to collect responses, which showed how data can be organized and managed.

This task gave me practical experience with tools that support both learning and collaboration. It helped me understand how these platforms can be useful in academics and future work.

Task 4 Write-up

For Task 4, I learned about professional communication and responsible use of social media. I wrote two formal emails, one requesting an assignment extension and another applying for an internship. This helped me understand how to write emails in a clear, polite, and professional manner.

I also created a checklist of do’s and don’ts for social media usage. This included points such as protecting personal information, avoiding inappropriate content, and being careful about what we share online.

This task helped me understand that communication and behaviour in digital spaces can affect our academic and professional image.

Task 5 Write-up

While researching about cybercrime, I was surprised by how easily people can fall victim to online scams. Even small actions like clicking an unknown link or trusting a message

can lead to serious problems, including financial loss. I did not realize how common these incidents are.

One habit I will change is being more careful while using the internet. I will check links before clicking and avoid sharing any sensitive information like passwords or UPI details. This task has made me more aware and responsible about my online safety.

Conclusion

This project helped me understand the importance of digital literacy in today's world. It improved my knowledge about safe internet practices, digital tools, and professional communication. Each task provided practical experience and helped me develop responsible online behaviour. Overall, the project was useful in building awareness and improving my digital skills, which will be helpful in both academics and future career opportunities.
